115 / 230V (50-60Hz)

The MA4000-XP-ET antenna mast has Boresight functionality and is suitable for use in either open areas or in electromagnetic absorption chambers. Metal parts are located only in the base plate and the drive

mechanism (max. 0,4 m above ground level).

All antennas rotate around their own axis during polarisation to eliminate any elevation errors. Limit switches and the general mechanical design provide a safe system operation.

The **IEEE 488 (GPIB) bus,** when operated with the CO2000 Controller, or **IEEE 488 (GPIB) & TCP/IP (LAN)** interface, when operated by **CO3000** Controller provides an additional control option for all functions.
