## **Brief description**

The DS3000-S turntable is specifically designed for installation either at intermediate levels in electromagnetic absorption chambers or in open areas. The base plate is available in stainless steel.

If a ground plane exists, and the carrying plate is made of steel, then the adapter contact ring with a quadratic rim can be supplied. A 0,2 m diameter opening in the centre of the turntable provides the capability to insert a power supply for testing. Removable braces can be installed if necessary.

The **IEEE 488** (**GPIB**) **bus**, when operated with the CO2000 Controller, or **IEEE 488** (**GPIB**) & **TCP/IP** (**LAN**) interface, when operated by CO3000 Controller provides an additional control option for all functions.
